Section C

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

Growing up, I heard the word *genius* a lot.

It was always my dad who brought it up. He liked to say, "You know, you're no genius!" I don't remember how I responded. Maybe I pretended not to hear.

I wasn't the only problem. My dad didn't think my brother was a genius, either. By his standards, none of us measured up to Einstein. Apparently, this was a great disappointment. Dad worried that this would limit what we'd eventually achieve in life.

Two years ago, I was fortunate enough to be awarded a MacArthur Fellowship, sometimes called the "genius grant." It is an award given by a secret committee that includes the top people in your field and decides you're doing important and creative work.

I was surprised and grateful. Meanwhile, I had time to think about the situation. A girl who is told repeatedly that she's no genius ends up winning an award for being one. The award goes to her because she has discovered that what we eventually achieve may depend more on our great interest and perseverance than on our inborn talent. She has by then obtained degrees from some pretty tough schools, but in the third grade, she didn't test high enough for the gifted program. Her parents are Chinese immigrants (移民), but she didn't get lectured on the greatness of hard work.

The morning the MacArthur was announced, my dad said to me, "I'm proud of you." I had so much to say in response, but instead I just said, "Thanks, Dad."

I knew that my dad was proud of me. Still, part of me wanted to travel back in time to when I was a young girl. I'd tell him what I know now.

I would say, "Dad, you think I'm no genius. I won't argue with that. You know plenty of people who are smarter than I am." I can imagine his head nodding in agreement.

"But let me tell you something. I'm going to grow up to love my work as much as you love yours. I'll challenge myself every day. When I get knocked down, I'll get back up. I may not be the smartest person in the room, but I'll try my best to be the grittiest."

And if he was still listening: "Over time, Dad, grit may matter more than talent."

21. Why did the author's father think of her as a problem?

A) She was a troublemaker and not a good student.

B) She felt that she was a genius while growing up.

C) She had no interest in science as her brother did.

D) She, like her brother, was not as smart as Einstein.

22. Who receive the MacArthur Fellowship?

A) Those creative in their work.　　B) People who discover geniuses.

C) The top people in their field.　　D) Inspiring and successful children.

23. What does the author say about the way she was educated and raised?

A) She was placed in the gifted program in grade school.

B) She graduated from universities with high standards.

C) She received special awards repeatedly at college.

D) She was often told by her parents to work hard.

24. What did the author do to her father, who was proud of her winning the MacArthur?

A) She reminded him of what he used to say to her.

B) She told him that she always loved her work.

C) She actually said nothing to him but thanks.

D) She admitted that he was right in being strict.

25. In the author's view, the secret to success is _____.

A) natural abilities　　B) parenting　　C) education　　D) determination

Passage Two

Recently, researchers have been getting more and more interested in the role that mental motivation plays in academic achievement — sometimes called "grit" or "growth mindset." Jordan Peterson, a professor of psychology at the University of Toronto, Canada, wondered whether writing could be shown to have some effect on student motivation. He created an undergraduate course called Maps of Meaning. In it, students complete a set of writing exercises that combine expressive writing with goal-setting.

Students remember and examine important moments in their past, find out key personal motivations and create plans for the future, including particular goals and techniques to overcome obstacles. Peterson calls the two parts "past authoring" and "future authoring."

"It completely turned my life around," says Christine Brophy, who, as an undergraduate several years ago, was battling drug abuse（滥用）and health problems and was going to drop out. After taking Peterson's course at the University of Toronto, she changed her major. Today she is a doctoral student and one of Peterson's main research assistants.

In an early study at McGill University in Montreal, the course showed a powerful positive effect on at-risk students, reducing the number of students who drop out and increasing their academic achievement.

Peterson is seeking a larger audience for what he has called "self-authoring." He started a for-profit company and is selling courses online. Brophy and Peterson have found a receptive audience in the Netherlands.

At the Rotterdam School of Management, a shortened form of self-authoring has been required for all first-year students since 2011. (These are undergraduates — they choose majors early in Europe).

The latest paper, published in June, compares the performance of the first complete class of first-year students to use self-authoring with that of the three previous classes.

Overall, the "self-authoring" students greatly improved the number of credits earned and their probability of staying in school. And after two years, group differences based on race in performance among the students had almost disappeared.

The ethnic minorities (少数族裔) in question made up about one-fifth of the students. They are first- and second-generation immigrants from non-Western backgrounds — Africa, Asia and the Middle East.

While the history and effect of race-related problems are different from those in the United States, the Netherlands still struggles with large differences in wealth and educational achievement between majority and minority groups.

26. What is the method used by Peterson to change student motivation?
    A) He advises students to forget about failures in past courses.
    B) He creates maps of future goals for students who need help.
    C) He trains students in using proper techniques for their study.
    D) He gives students writing tasks to examine and plan their lives.
27. What does the author say about the positive effect of Peterson's course?
    A) More students have started their companies.
    B) More students have chosen to stay in school.
    C) More students are willing to take risks in life.
    D) More students are now choosing this course.
28. By "self-authoring", Peterson requires students to _____.
    A) finish an online course to choose their majors
    B) write about their past, present and future lives
    C) imagine a larger audience for more courage
    D) have more self-control in facing obstacles
29. What is the finding of Peterson's study of "self-authoring"?
    A) The students were overall making good progress in their study.
    B) The minority students had difficulty catching up with others.
    C) The students' performance showed differences across races.
    D) One fifth of the students earned more credits to stay in school.
30. What does the author say about the Netherlands in the last paragraph?
    A) Its race-related problems are more serious than those in the U.S.
    B) It still struggles with its position on the race problems of the U.S.
    C) Minorities are not as rich and educated as people in the majority.
    D) The history of treating other races badly cannot be forgotten easily.

I) Here is what I tell the parents: Think of what you want to tell your children when you finally say goodbye to them and they go off to their dorm and the beginning of their new chapter in life and you set out for the emptier house that you will now live in. What thoughts, feelings and advice do you want to convey? "Always make your bed!"? "Don't wear your hair that way!"? Surely not. This is a moment to tell them the big things. Things you feel about them as children, as people. Wise things. Things that have guided you in your life.

_____ 11. The author would like to ask parents to think about what kind of people they want to take care of them when they are old.

_____ 12. Parents may feel emotional about sending children off to college, and this is not an easy and smooth change in life.

_____ 13. Naturally, parents want to help their children solve problems and succeed.

_____ 14. Every year the author feels honored to speak to parents of freshmen who come to Emory University.

_____ 15. Parents should know that while in college, their children still need one semester to learn to grow up to be college students.

_____ 16. Parents should use this special and rare moment of saying goodbye to tell their children what they will remember.

_____ 17. New freshmen have plenty of advice for them already, so the author would like to talk to their parents to help them.

_____ 18. The more help parents offer to their children, the weaker the children will become and the more probably the children will depend on them.

_____ 19. The author wants to advise parents to allow their children to make decisions and reach solutions on their own.

_____ 20. The author wants parents to know that although it may be hard to get over the emptiness after their children have left for college, they should feel excited about their new life.

Section C

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

The boy has gone off to college now. And here I am, left with all the peace and quiet I have learned not to miss.

I was not a man who wished for children. It seemed quite opposite to the idea of human happiness. I was single most of my life, and parenthood was something that caused other people to suffer. I watched it from a distance, and trembled with horror.

When they were small, children seemed to scream for no apparent reason. As teenagers, they seemed to have their moods (情绪) changing back and forth, while listening to music with more bad language than my uncles used when drunk. In between babyhood and high school graduation (if their parents were lucky), they were mostly just unclean.

Then one entered my life. I did not plan on him. He just came in the package, like the ninth piece of chicken in an eight-piece box, and, in time, made me pay for all the happiness I had enjoyed. He was 11 when he appeared, past the screaming years and before the age where everything that fell from my mouth was considered stupid. I got him in the unclean years, when I tried to avoid close contact with him because I was never quite certain where he had been. This is the child who once licked spaghetti sauce off the underside of his arm. No more needs to be said.

When he discovered girls he got much cleaner, but suddenly I was unfit to be around. I always said the wrong thing, or too loud a thing. When he had a girl over, I had to go to whatever room he was farthest from.

"I used to be cool," I said. "Some people think I still am."

He gave me a pitying look. So did his mom.

And now he is gone to college and I miss him, which is how I know there is indeed a God and He is good at playing tricks, and knows how to make a man pay for his mistakes. He remembers that long ago I felt annoyed in my airplane seat, thinking over and over that the screaming baby behind me should've been left at home, even if it meant her grandparents wouldn't see her until high school graduation.

I am not alone in this sadness in our house, in this empty nest. I barely even had a nest, before it was empty, though I guess I have no one to blame but me. His mom misses him, too, of course. Even the dog misses him.

The dog loved the boy. Woody Bo met him every day at the door after school, knowing he was home because every time the boy locked his car, it gave a short, quick honk (喇叭声). Woody who is too fat to jump (usually), shot into the air at the sound, destroying furniture on a mad dash to the door. A dog should love his boy, I suppose.

His world is in pieces now. The boy has been gone for months. The dog will not even go in his room — not one time since he left. Recently, my wife had to use the boy's car and, unsure if she had locked it, aimed the remote control (遥控) thing at the window and pressed "lock." The horn gave its quick honk, and the dog shot into the air and raced to the door, his tail wagging (摇).

He sat there a long time.

I guess I know how he feels.

21. What did the author think of having children before?

A) He didn't want children because he didn't think they could bring happiness.

B) He remained single because he thought parents could make children suffer.

C) He liked children because they were fun with craziness and various moods.

D) He liked to watch children play from a distance when they were dirty all over.

22. What do we learn about the author's relationship with his son from the passage?

A) He had his son after eleven years of marriage.

B) His son is from his wife's previous marriage.

C) He enjoys becoming his son's close friend.

D) His son made him talk the way a father should.

23. What was the author's past view of teenagers?

A) They had a very bad taste for music.

B) Most of them liked to keep themselves clean.

C) They spoke bad language like his drunk uncles.

D) Few of them were lucky to have good parents.

24. The author mentions that he knows there is a God because _____.

A) he can't believe that his son can go to college

B) he feels amazed that his son has made such a big change

C) he is glad that he can let go of his son when he goes to college

D) he believes he's being punished as a father missing his son now

25. What does the author say about their dog?

A) It is eager to jump into the car to see his son at college.

B) It is worried that his son might take it away from home.

C) It is mad about his son's car being used by somebody else.

D) It is sad and disappointed that his son does not show up.

Passage Two

When Mengshi Zhao arrived at Michigan State University last summer, it took some getting used to. The grassy views of the upper Midwest were different from China's overcrowded cityscapes. He had free time to fill, unlike his strictly controlled high-school days, when he was awakened before dawn and required study sessions lasted late into the night. And American food — it wasn't so tasty, he thought.

But one thing was the same: All around him were Chinese students.

Mengshi's dorm, McDonel Hall, sometimes seemed as if it belonged back in China. At meals, chatter in Mandarin Chinese mixed with the clink of forks and dishes. Waiting for the campus bus were always groups of Chinese students; it was easy to fall into conversation.

Nearly 1,000 incoming freshmen at Michigan State last fall — roughly one in eight new students — were from China. That proportion（比例）was made yet more surprising by this fact: Just six years earlier, fewer than 100 Chinese undergraduates, total, were enrolled here. In 2012, by contrast, more students starting their freshman year called China home than those who came from Illinois, Indiana, Ohio, Pennsylvania, and Wisconsin combined. It's a significant shift at a university that has been called "a big Michigan high school."

Michigan State isn't the only college, of course, with a fast-growing Chinese population. In the fall of 2011, nearly 200,000 Chinese families sent their children off to study in the United

States, almost double the number of any other country and twice as many as five years earlier.

Most will return home with what they came for — an American degree. But will they get an American education?

Are these two things really different, after all? The Chinese students who come to Michigan State and universities like it are unquestionably book smart. But a college education is meant to be more than a credential, most educators would agree, one that is measured not so much in grades as in learning, exploring, testing new waters. Will Chinese students take away its full value if they graduate with a 4.0 but few American friends? If limited English holds them back during class discussions? If the pressure to study keeps them from socializing?

Students like Mengshi have come so very far for an American education. But some wonder if it's far enough.

26. Why did it take some getting used to on Mengshi's arrival at Michigan State?
    A) He saw open green space as well as tall buildings.
    B) He had to plan his own time for his life and study.
    C) He did not like the large amount of food served.
    D) He missed his high school days with lots of friends.
27. According to the author's observation of Chinese students, living on the campus of Michigan State is _____.
    A) convenient with restaurants and bus services
    B) challenging because of cultural differences
    C) boring when they have to eat American food
    D) quite similar socially to living back in China
28. What do we learn about the growing of Chinese student population at Michigan State?
    A) About eighteen percent of the total student population is Chinese.
    B) The number has increased about 10 times compared with 6 years ago.
    C) Chinese students from other states have changed to study at Michigan State.
    D) The increase is also due to the number of Chinese students in local high schools.
29. What does the author believe college education should be more about?
    A) Pursuing a degree from an American university.
    B) Being book smart and graduating with a 4.0.
    C) Taking away the full value of various pressures.
    D) Trying new learning and cultural experiences.
30. What does the author mean by saying "some wonder if it's far enough" at the end of the passage?
    A) Whether Chinese students are experiencing something new is questionable.
    B) Chinese students need to work hard to meet American academic standards.
    C) As people from China, students also need to learn about their own culture.
    D) It is impressive that Chinese students have the courage to study in the U.S.

_____ 11. What the world is now has taught us that it has not come true that we study history to avoid repeating the same mistakes of the past.

_____ 12. To understand well how the world works involves our deep knowledge of the past.

_____ 13. In history we seek the meaning of our existence by gaining a better understanding of ourselves.

_____ 14. Because we were forced to study history at high school, we really didn't learn much of importance.

_____ 15. The author does not agree with the view that history can help us predict the future because it repeats itself.

_____ 16. Learning and getting to know our history can help to keep our traditions alive.

_____ 17. A good teacher is crucial to a student's positive learning experience with history.

_____ 18. The way historians think is not different from the way people in other fields think.

_____ 19. As we grow older, we find out that the world is actually bigger than our immediate surroundings, and feel eager to know more.

_____ 20. History is part of everything and should be celebrated instead of being forgotten.

Section C

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

Anne Frank: The Diary of a Young Girl is a very inspirational and moving diary that should be read by everyone, especially students. Not only will many relate to it, but it is valuable for both the mind and the heart. The touching story reveals the history of World War II, unforgettable people, and lessons that will stay in your heart forever.

While reading *Anne Frank*, I learned a great deal about what really happened during World War II. It was an unimaginable horror: millions of people dying at the hands of biased (带偏见的) beliefs. Reading this really took me back to 1944 and put me right there in the Secret Annex at the back of her father's company building, holding my breath as Nazi troops passed by on the streets below.

The wisdom I gained will remain with me forever. Now I see the Holocaust as something more than a tragedy we learn about in school: it seems more real, more horrific, and somehow bigger and worse than I had imagined.

The characters clearly have their own personalities. Some are extremely argumentative (好争论的), and some are unbelievably sociable (好交际的). Each of them adds a different flavor to the journey. I truly felt connected to these people hiding away, as if I had known them forever. Sometimes, it was as if Anne and I were best friends, sitting there and talking. Other times I could feel Mrs. Van Daan's hurtful comments.

Knowing that these people were real, and that they lived and died at the hands of the Nazis, brought an interesting perspective (视角) to the story. These weren't made-up characters; they once walked on this earth. In the end, I was truly fond of them and their stories, and I know other students will, too.

No one can read *Anne Frank: The Diary of a Young Girl* and not take away a very valuable lesson. Focusing on the problems of growing up, dealing with tough times, and the never-ending power of hope, these concepts really strengthened my morals. Throughout the book, young people will be able to relate to Anne's quarrels with her sister and parents, and we all understand how hard it is to face our biggest fears. Anne will teach us all something to save forever: I know she taught me.

After reading this treasured book, I felt more knowledgeable and touched. Anne Frank's diary will help everyone through the toughest and most confusing times with her famous words, "Despite everything, I still believe that people are really good at heart."

21. What do we learn about *Anne Frank: The Diary of a Young Girl*?
    A) It focuses on the horrible things a girl saw during World War II.
    B) It was written by a little girl hiding away during the Nazi occupation.
    C) It tells stories about the sufferings of people in a Nazi concentration camp.
    D) It is difficult to understand and relate to if the reader doesn't know history.
22. What does the author say about the Holocaust?
    A) It was caused by the unreasonable opinions of some murderers.
    B) It goes down in history as the greatest tragedy humans can imagine.
    C) It should be something we must learn about in school for its horror.
    D) It is well represented in the book and matches what is taught in school.
23. What does the author think about the characters in the book?
    A) They are like his family members who also died during the war.
    B) They are nice people who love to make friends while traveling.
    C) They are like real people he knows and feels close to in his life.
    D) They are hard to get along with due to their different personalities.
24. What valuable lesson has the author taken away from the book?
    A) The power of writing.
    B) Living every day with hope.
    C) Growing up with your own values.
    D) Placing a moral value on family life.
25. What does the author think the book can help readers do?
    A) Experience fears and hardships indirectly.
    B) Believe in the goodness of human nature.
    C) Understand other people's joys and pains.
    D) Treasure the time you have with your family.

Passage Two

"War is not good for children and other living things," was often heard during the 1960s, yet man has been using violence and going to war against his fellow man for thousands of years and continues today, as evidenced by the ongoing conflicts (冲突) in many parts of the world. However, the character of war has changed. In ancient times, it was fought with stones and clubs (棍棒) and then advanced to spears and bows and arrows. We then "progressed" to guns and on to bombs, mines (地雷), and other weapons that enabled us not only to kill enemies but also to destroy civilians and the environment. Man has finally achieved, with the development of nuclear weapons, the ability to destroy entire populations and with even more advanced technology to attack very specific targets, as was shown during the Gulf War in 1990.

What are the effects of war? Human casualties are the most immediate effect of armed conflict. Before the 20th century, the major casualties were soldiers who died both from war injuries and infection. If one examines the average number of deaths/million population from wars for every year in the past, it ranges from 19.0 in the 17th century to 10.8 in the 19th century. This increases greatly in the 20th century to 183.2 deaths/million with a large increase in deaths among the civilian population. In World War I, 19% of the deaths occurred among civilians. During the Spanish Civil War, World War II, and the Korean and Vietnam Wars, 50%, 48%, 34%, and 48% of the deaths respectively (分别), occurred among civilians. In the 1980s, 85% of war deaths were civilians.

However, it can be argued that the long-term effects of war are probably more damaging than the immediate effects. This is particularly true for children. One year's spending on Star Wars research could provide an elementary school education for 1.4 million Latin American children and the cost of one Trident submarine could fund a 5-year program for universal immunization (免疫) against six major deadly diseases. These figures do not even consider some of the other effects of war such as the effect of refugees on struggling host countries, destroyed hospitals and schools, food shortage, increased infant and childhood death rates, and the breakup of families.

26. What do we learn about the changed character of war from the passage?
    A) War has become more destructive with modern weapons.
    B) War can be spread more widely in many parts of the world.
    C) War can be controlled in its destruction of the environment.
    D) War has been fought more and more for political reasons.
27. What do we learn about human casualties caused by war in history?
    A) Before the 20th century, the major causes of death were war injuries and infection.
    B) The number of soldiers who died in war increased from the 19th to the 20th century.
    C) The percentage of soldiers who died during World War II is 48%.
    D) The targets of war have changed from soldiers only to civilians as well.

28. What does the author mean by "the long-term effects of war" (Line 1, Para. 3)?

A) The decrease of population.

B) The destruction of natural resources.

C) The nuclear weapon competition.

D) The sufferings of children.

29. What is the author's view of Star Wars research?

A) The money was spent at the cost of educational services.

B) It could teach children the value of scientific research.

C) The results would be important to Latin America too.

D) It meant little to the progress of developing countries.

30. The author thinks the long-term effects of war are more damaging because _____.

A) it will lead to more cultural conflicts and the spread of diseases

B) it increasingly relies on advanced technology to attack targets

C) it can affect the quality of life for many years and generations

D) it is aimed at not just defeating but also destroying enemies

Part III Translation

Directions: Translate the passage from Chinese into English.

在历史的长河中，犹太人由于各种原因很容易成为攻击对象。二战期间，希特勒声称德国的问题都是犹太人造成的，他的话被醒目地刊登在报纸上。为了逃避大屠杀，25,000名犹太人来到上海避难。当时的上海是一座非同寻常的国际化都市。让犹太人惊叹不已的是当地的中国人善良且富有同情心。上海犹太难民纪念馆收藏着大量的照片和其他实物(artifacts)，旨在传达记住历史、热爱和平的信息。

_____

_____

_____

For example, he recognized Li Zhengdao's outstanding abilities when he found Li self-studying materials more challenging than what was taught in the course. Expressing his faith in Li as a gifted student, he excused him from class and required only lab attendance. Despite controversy (争议) over Li's younger age, he selected Li for a study-abroad program in the U.S.

J) Such was Ye Qisun, a remarkable educator who will always be remembered for his dedication to the promotion of science and education in China. His story will inspire those who seek to make a difference in the lives of their students.

_____ 11. Ye Qisun believed that understanding each student was key to unlocking their talent and potential.

_____ 12. Ye helped to broaden young students' horizons at university and changed the directions of their lives.

_____ 13. Ye made great efforts to hire top physicists in order to build a strong department at Tsinghua.

_____ 14. Ye remains relatively unknown compared with those big names of his time.

_____ 15. Ye's study in the U.S. made him realize that he should promote science back in China for the country's development.

_____ 16. Ye was raised in a progressive family that valued well-rounded education for the learning of science and personal growth.

_____ 17. Ye's educational philosophy made a big difference to the courses that physics students at Tsinghua were required to take.

_____ 18. Through research with his American professor, Ye made a breakthrough and established himself in the academic world.

_____ 19. Ye's early interest in science shaped his personal goal of making contributions to the country's development.

_____ 20. Ye's great impact as a teacher has been felt through his famous students' success.

Section C

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

Ever since I was a little girl, my parents told me that when I grew up, I should do what I love and love what I do. For some reason, however, my mother assumed I would be a biology major in college, because she thought I would follow in the footsteps of my grandmother, who'd always wanted to be a doctor. However, due to the outbreak of World War I, my grandmother was unable to fulfill that life passion.

Biology was not one of my strongest subjects, but I made it through my college studies and ended up becoming a registered nurse. I did this job for a few years, but all the while I made time to write. Ever since my mother bought me my first box of pencils, followed by my first notebook, I knew that writing was something I loved. I always felt good when I was writing, and that's how I figured out my life passion.

When my students ask me how they can determine where their passions lie, I often ask them to look back into their childhoods to find out what brought them joy. Many know the answer without much reflection; in many cases, their life's work is similar to their childhood passion. My next suggestion is to write an essay about what they would rather be doing. This helps them understand what might bring them the most joy and satisfaction.

We are all in search of happiness, which is so often tied to life passion and doing what we were meant to do. Our passion is what we want to do naturally, not what sounds good or what others want us to do. Passion is the fuel that drives us to get out of bed in the morning; it moves us toward our goals. Sometimes, finding our passion simply has to do with listening to our inner voice and ignoring the noise around us telling us what we should do. It's also about surrounding ourselves with people who have similar interests and passions we admire. If we prefer being alone, sometimes it's best to distance ourselves from others so we can hear our inner voice clearly.

21. What do we learn from the passage about the author's mother?
    A) She loved her major in biology at college.
    B) She had her idea about the author's career path.
    C) She kept the family tradition of medical practice.
    D) She expected the author to live in a peaceful world.
22. What is the author most probably doing for work now?
    A) She's a doctor.
    B) She's a registered nurse.
    C) She's a writer.
    D) She's a biology teacher.
23. According to the author, how can people discover their passions?
    A) By studying subjects they are interested in.
    B) By reflecting and writing on their interests.
    C) By feeling satisfied about their life's work.
    D) By reinventing various childhood games.
24. Which of the following is true of the author's view of passion?
    A) It is something we all love to pursue.
    B) It helps us develop good daily habits.
    C) It is linked to what is expected of us.
    D) It gives us purpose and motivation.
25. To find out passions, the author suggests we focus on _____.
    A) making friends with various people
    B) creating the right environment
    C) knowing our inner desires
    D) working independently

Passage Two

When we think of leaders, we may think of people such as Abraham Lincoln, Susan Anthony, or Martin Luther King, Jr. If you consider the historical importance and far-reaching influence of these individuals, leadership might seem like a noble and admirable goal. But like all of us, these people started out as students, workers, and citizens who possessed ideas about how some aspect of daily life could be improved on a larger scale (规模). Through diligence and experience, they improved upon their ideas by sharing them with others, seeking their opinions, and constantly looking for the best way to accomplish goals for a group. Thus we all have the potential to be leaders at school, in our communities, and at work, no matter what age or experience level. Leaders are crucial at every level of an organization; cultivating leadership skills early is a great way to pave the way for success.

Many people have no desire to be leaders; after all, leadership comes with many responsibilities and risks that other members of a team do not have to worry about. Thus some people are more comfortable in the role of contributor. However, in much of today's world, teamwork is essential for completing projects and assignments, and teams without leaders usually are ineffective in achieving their goals. They struggle and may fail without a leader's help to focus on the goal and to make choices that will move the team toward that goal.

In school and extracurricular (课外的) activities, you may be able to avoid the responsibilities of leadership: Someone else usually will step forward to take on a leadership role. But in the workplace, the choice will not always be yours. When you are assigned a project, you will most likely need to rely on the help and support of others. These people, in effect, become your team. To get the most out of their efforts, you will need to exercise good leadership.

Leaders inspire others to act by setting good examples. Their determination and perseverance encourage others. Leaders try to be the best they can be — not to compete with others. In fact, a leader's job is to help others make their best contribution toward a shared goal.

Leaders motivate others by trusting each other. The leader must trust in his or her teammates' abilities and willingness to pursue a goal. At the same time, the team must trust in their leader's ability and willingness to provide needed support. This mutual (相互的) trust is extremely necessary in building a team that will be successful in reaching its goal.

26. The examples of Abraham Lincoln, Susan Anthony and Martin Luther King, Jr. show that _____.

A) great leaders have special qualities others do not have

B) noble leadership has a powerful influence on the nation

C) we all can develop leadership skills like these people

D) the difference between good and bad leaders is their goals

27. What do we learn about the way great leaders work to achieve their goals?

A) They share and improve their ideas for a better society.

B) They use their personal influence to win public support.

C) They make decisions constantly with their own experience.

D) They work hard with people with different experiences.

28. What does the author say about leadership in today's world?

A) It takes energy and social skills to succeed.

B) It requires new ideas and new thinking.

C) It focuses on skills for completing big projects.

D) It makes a difference in achieving group goals.

29. It is necessary to exercise good leadership in the workplace because _____.

A) many people may compete for the leadership role

B) some people may try to avoid their responsibilities

C) people need to work as a team for help and support

D) the best effort by a team member can be observed

30. What is the author's view of a good leader?

A) He should be able to motivate others for a common goal.

B) He should trust members in choosing their own groups.

C) He should help everyone to pursue their personal goals.

D) He should inspire people to compete to be the best.

《感动中国》是中央电视台出品的一档知名节目，每年2月播出盛大的颁奖仪式。多年来，这档节目吸引了大量观众，主要有两个原因：一是通过介绍一些励志人物传播了正能量；二是让人们关注特别优秀的老百姓，比如执着的山村教师、残疾人士，以及远在深山中致力于脱贫事业的村长。这些人排除万难，为中国的发展做出了贡献。

philosophical and political implications (含义) in the human right to water, free markets, the appropriate role of governments, and conflicting visions of the future. Contrasting forces are also at work, including the anti-globalization movement, the growing effort to be "green," and the newly awakened concern about climate change and its root cause — our energy use.

H) It is possible that we will look back in a few decades at a short-lived bottled water craze and wonder what we were thinking. But if we don't address our growing water crisis, we could just as easily look back sadly at the years of safe, cheap, and reliable tap water as a golden age when, for a little while, we could just turn on the tap and drink as much as we can.

_____ 11. Programs for recycling plastic bottles have not been successful because the bottled water companies have tried hard to prevent them.

_____ 12. The bottled water industry has problems, but it is governments, not bottled water, that should be blamed for global water problems.

_____ 13. It is necessary to deal with the water crisis so that drinkable tap water will be in continuous, abundant supply.

_____ 14. Bottled water is an issue complicated by its political, environmental, economic and psychological impact.

_____ 15. People around the world consume bottled water four times the amount consumed in the U.S.

_____ 16. When we choose bottled water, we actually have neglected the fact that people in poor countries have no access to safe and clean water for survival.

_____ 17. The advertisements used by the bottled water companies have the purpose of causing fear of contaminated tap water in people who then have to choose their product.

_____ 18. Bottled water is, in fact, an issue of water access and disease prevention for children in many countries.

_____ 19. The bottled water companies defend themselves by arguing that they are responding to water problems instead of causing them.

_____ 20. News stories and advertisements have a strong influence on our choice of bottled water over tap water.

Section C

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

Every time man uses water, it sets off a widening effect that has consequences few people understand. But we can no longer afford to ignore our impact on water supplies. We must

accept the new reality and adapt (适应). The good news is that water is renewable: Humans may pollute it, overuse it, or allow it to evaporate (蒸发) into the hot sky, but we cannot destroy water. The challenge is to learn how to manage the earth's limited supply more efficiently and sustainably.

The bad news is that people usually resist change until a crisis is underway. In the 1930s, Americans ignored warnings about drought and poor farming practices until the Dust Bowl drove 2.5 million people off the Great Plains. For decades, more warnings about water pollution were ignored, until the Cuyahoga River, polluted from industrial waste buildup, caught fire in 1969. Even in the first decade of this century, Americans still continued to ignore warnings that they were polluting and draining important supplies such as the Colorado River, the Everglades, the Great Lakes, the Mississippi, and the Sacramento Delta. Today, water scarcity, population growth, and environmental damage have combined to force the kind of awareness that the United States has not seen in forty years.

In the 1970s, the American environmental movement forced the passage of the Clean Water Act and the Safe Drinking Water Act, and the founding of the Environmental Protection Agency. Thus began a remarkable period of collective action when Americans, for the first time, agreed on the need to protect the nation's water supply.

Nearly half a century after the Clean Water Act was signed in 1972, America and the world face a second significant period in which our actions, and inactions, will have serious consequences for water supplies for years to come. There are plenty of suggestions, and sharp disagreements, over how to respond. One camp favors building up water supplies by increasing the nation's reservoirs (水库), canals, and pipelines. Another group favors a new water ethic (伦理) built on the opposite approach: conserving existing water supplies and limiting new demand through efficient technologies, strict control, price incentives (激励), and broad public education.

21. What is the good news the author talks about in the first paragraph?
    A) People are aware that they should not waste water.
    B) People's reuse of water has become more common.
    C) People's activities cannot affect the existence of water.
    D) People know how to manage limited water supplies.
22. What water crisis did the U.S. have in the 1930s?
    A) Polluted water made farmers give up their land.
    B) Drought caused the soil to turn to waves of dust.
    C) Lack of water for farming forced farmers to leave.
    D) Too many people competed for water on the Great Plains.
23. What caused the Cuyahoga River fire, according to the passage?
    A) Drought and poor farming practices.
    B) Pollution from a growing population.
    C) The rubbish from local residents.
    D) The gathering of factory waste.

24. A remarkable period began in the 1970s when _____.

A) water for industrial production was more easily available

B) there was a nationwide movement for water protection

C) water scarcity was not a problem despite population growth

D) Americans did not have any deadly industrial accidents

25. What is the difference between the two camps in their suggested solutions to the water problem?

A) Whether to use technology or to change habits.

B) Whether to increase supply or to use water responsibly.

C) Whether to control water use or to let go of the control.

D) Whether to consider the impact on the environment or not.

Passage Two

Some 330 million people — about one quarter of India's population — are facing the worst water crisis in four decades. A drought has turned vast areas of the country into a dust bowl, drying up crops and forcing farmers from their lands. Coal-fired power plants — the major source of India's electricity — have had to stop output because there is not enough water in nearby rivers. Armed guards are being posted at dams to prevent farmers in need from stealing water.

Over 600 million people in India depend on agriculture for their living and nearly two-thirds of land under cultivation has no irrigation and so relies on rain.

Part of the problem is El Niño, the climate pattern that puts extra heat into the atmosphere. But much of the problem is a result of years of mismanagement of water resources, a failure to stop corruption (腐败) and the hesitation of the Indian government in taking action to help those affected.

A recent American report by the National Aeronautics (航空) and Space Administration based on satellite images showed a sharp decrease in groundwater levels under northern India's irrigated fields of wheat, rice and barley. The response — drilling wells deeper as water levels fell — has made the problem worse.

Reservoirs and wells are now running dry. India's so-called sand mafia, an organized group of people operating in secret with the support of local officials, has also contributed to the problem by illegally removing sand — important to allow water to go underground slowly — from riverbeds to supply concrete (混凝土) for India's fast-developing construction industry.

India is now entering the hot season, and temperatures have risen to record levels. Thankfully, El Niño is pulling back, and the India Meteorological (气象的) Department is predicting an above-average rainy season later this year, which will help to improve the situation. But unless there is a way to build facilities to quickly capture the rain, much of it will simply run off or evaporate.

The government's most urgent task is to help those suffering from the drought. It must also place water at the center of its development plan. A growing population means that India's water needs will only increase, even as climate change will most likely make water scarcer.

26. What is the water problem facing one quarter of India's population?
    A) Water is being polluted with the fast industrial development.
    B) The rainy season has not brought rain as farmers expected.
    C) People fight for water due to uneven water distribution.
    D) A drought is taking place as a heat wave hits the vast areas.
27. In addition to the climate, the author thinks another major cause of India's water problem is _____.
    A) the stealing of water by farmers
    B) the inefficient agricultural use of water
    C) the government's inability and inaction
    D) the difficulty of developing water-storage facilities
28. What do we learn about the report by the National Aeronautics and Space Administration?
    A) Groundwater levels in northern India have dropped.
    B) Northern India has drilled too many deep wells.
    C) Northern India is unsuitable for growing crops.
    D) Irrigation in northern India should depend on rain.
29. What has the sand mafia done to make the water problem worse?
    A) They have turned water into a commercial product.
    B) They have used sand to keep water underground.
    C) They have controlled local resources for officials.
    D) They have supplied sand for construction projects.
30. The author suggests at the end of the passage that the Indian government should _____.
    A) prioritize the country's water needs in its development plan
    B) control population growth to reduce the demand for resources
    C) address agricultural development with new technologies
    D) take action to ensure that research is done on climate change

Directions: There are two passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice.

Passage One

College students seem unable to get off their cellphones. Professors find it challenging to get students to stop using their cellphones in class. Doug Duncan, a professor at the University of Colorado, has come up with a solution to smartphone distraction in his astronomy class. He has published a paper showing that, at his college, more than 75 percent of undergrads reported texting while in class, and that in-class texting was linked to an average drop of half a letter grade in the course.

Ten percent of the grade in Duncan's class comes from participation points. To reduce smartphone use, he carried out an experiment. While sharing his plan with his colleagues, he wrote: "I asked my students to vote (投票表决) if I should offer one participation point for taking out their cellphone, turning it off and leaving it out on my desk. To my amazement 100% voted yes. So they all took out their phones, put them on the desk, and we had an extremely engaged class." Three class meetings later, the no-cellphone rule is still going strong.

Should other professors follow Duncan's lead? Larry Rosen, a research psychologist at California State University, studies smartphone use among college students. He doesn't think simply rewarding students for turning off their phones is a good strategy. "It doesn't get at the real issue of why students are distracted," he explains. "Most college students are heavy users who are going to get anxious within 10 or 15 minutes if they can't check their phones." In experiments, Rosen has shown that students' heart rate and other vital signs (生命体征) rise when they hear their phones ring and can't answer them. He says that putting the phones in sight, but out of reach, even when turned off, will only increase that anxiety and the distraction that comes with it.

Rosen has his own solution. "I start by calling a tech break, where they can check their phone for one minute, every 15 minutes," he says. "Over time you can increase it to 20, 25. And within a couple weeks you can get them to go 30 minutes without needing it."

21. What is the finding reported in Doug Duncan's published paper?
    A) Most students at American colleges texted while in class.
    B) Professors were not effective in stopping phone use in class.
    C) Ten percent of his texting students could not pass the course.
    D) In-class texting reduced course grades by half a letter on average.
22. What experiment did Duncan carry out to reduce cellphone use in class?
    A) Students using their cellphones could lose one point.
    B) The whole class had to leave cellphones on the desk.

C) He designed class activities based on voting on the phone.

D) Cellphones had to be kept on the teacher's desk if used.

23. Larry Rosen advises other professors not to follow Duncan's lead because _____.

A) it may work at the beginning, but the temptation is too strong

B) it can only work well with some students but not with others

C) it works for a short while before most students get anxious

D) it really distracts heavy users, who actually pretend to listen

24. What has Rosen found in his experiments about students not allowed to use cellphones?

A) They were willing to put their phones in sight but out of reach.

B) They had faster heartbeat when unable to answer the phone.

C) They couldn't resist distraction for a minute and listen attentively.

D) They could control their anxiety when focusing on learning.

25. What solution does Rosen offer?

A) Students are allowed to check their phones every 15 or more minutes.

B) He turns his class into several short periods of 15 minutes or more.

C) Students can check their phones for just one minute in every class.

D) He tells tech support to block the connection every few minutes.

Passage Two

Teens are masters at keeping themselves occupied in the hours after school until way past bedtime. When they're not doing their homework (and when they are) they're online and on their phones, texting, sharing, you name it. Of course before everyone had a social media account teens kept themselves busy, too, but they were more likely to do their chatting on the phone, or in person when hanging out. It may have looked like a lot of aimless hanging around, but what they were doing was experimenting, trying out skills, and succeeding and failing in tons of tiny real-time (实时的) interactions that kids today are missing out on.

Nonetheless, modern teens are learning to do most of their communication while looking at a screen, not another person. Certainly speaking indirectly creates a barrier (障碍) to clear communication, but that's not all. Learning how to make friends is a major part of growing up, and friendship requires a certain amount of risk-taking. This is true for making a new friend, but it's also true for maintaining friendships. When there are problems that need to be faced, it takes courage to be honest about your feelings and then hear what the other person has to say. Learning to effectively cross these bridges is part of what makes friendship fun and exciting, and also scary.

But when friendship is conducted online and through texts, kids are doing this when many of the most personal — and sometimes frightening — aspects of communication are removed. It's easier to keep your guard up when you're texting, so less is at risk. You aren't hearing or seeing the effect that your words are having on the other person. Because the conversation isn't happening in real time, each party can take more time to consider a response. No wonder kids say calling someone on the phone is "too intense" — it requires

more direct communication, and if you aren't used to that it may well feel scary. If kids aren't getting enough practice relating to people and getting their needs met in person and in real time, many of them will grow up to be adults who are anxious about the primary means of communication for humans — talking.

26. The author thinks that after school teens should spend time _____.
    A) trying their hand at some real skilled work
    B) relaxing by having an account to chat online
    C) sharing notes and doing homework together
    D) talking to people and improving social skills
27. What does the author mean by "crossing these bridges" (Para. 2, Line 7)?
    A) Looking at the screen and speaking indirectly.
    B) Taking risks and having courage to communicate.
    C) Starting friendships and trying to maintain them.
    D) Finding friends and getting help to solve problems.
28. What does the author say about the advantage of chatting online?
    A) Making friends more easily.
    B) Less possibility of miscommunication.
    C) Feeling free to share one's views.
    D) Having more time for what to say.
29. What is the author's view of face-to-face communication?
    A) It is highly personal and sometimes scary.
    B) It requires keeping one's guard up.
    C) It may not go long enough to talk deeply.
    D) It works effectively with noise removed.
30. The author expresses his concern at the end of the passage that _____.
    A) teens will feel scared of expressing themselves freely
    B) teens will not decide carefully how to make friends
    C) teens will grow up not knowing how to talk in person
    D) teens will be too direct in their manner of speaking
